It depends on what we find

Julie Are we getting more samples from the case, We will need more drug controls if we are getting >50 samples . controls of the same concentration once put in mobile phase are good for maybe a week, We normally make controls and stds up and use within 2 days for morphine assays but had far less samples to run at one time. Peter P does not know if we are getting more samples

I think this is the first round of samples to come in but there could be 120 total if they submit more. I would ask Julie. I believe each type of drug has the same concentration and manufacturer but I didn't go through them one by one yet. When we take out the samples, I'll be the custodial chemist but will only work with them in your presence.

Is that correct above in subject line. Are injectables of each drug type all same type and concentration for each drug type. and is the total about 45 samples or? I can look at samples the with you tomorrow if want. Are you expecting more?
